

VU Scheduling Approaches in Distributed Systems.

Task 3 – "Definition of Optimization Constraints".

Student/Group:

- Daniel Eberharter

General Feedback:

The constraint to prevent secret communication across region borders is not entirely correct. Apart from that, a very very nice solution, especially w.r.t. the code structure and quality. Have a look at the constraint (I've commented directly in the code). Can you think of a way to also handle the case I described there?

Code Feedback:

I have added some comments directly into the code (sorry, should have probably made an extra branch :)). You could use -diff to see all the comments added by me. Most of it is merely on the level of suggestions.

Summary:

Good solution. Very good code structure and code quality. Well done! :)

Best regards,

Fedor
